SUMMARY

QA Engineer with 5+ years of experience in game systems stability and technical support. Expert in C# and Unity. Specialist in root cause analysis and performance profiling for AAA-ready projects

EXPERIENCE

QA Automation & Support Engineer

FUSE / People & Technology

January 2024 - July 2024

- Implemented automated testing frameworks across 8+ projects using **Unity Test Runner** and **GitHub Actions**, increasing defect detection rate by **27%**.
- Reduced manual QA time by **35% per sprint** by integrating automation solutions into the quality assurance pipeline via Jira and Git.
- Collaborated with 3+ development teams to identify and resolve critical usability challenges, resulting in a **10% improvement** in overall workflow efficiency.

Technical Support & Performance Engineer

Fyware

January 2025 - July 2025

- Utilized **Unity's Performance Profiler** and analytics to pinpoint bottlenecks, driving a **30% gain** in application speed and reliability for VR environments.
- Debugged intricate AR/VR functionalities and physics-based systems, reducing system-wide crash rates by **40%** over a 6-month period.
- Constructed realistic tool simulation features using raycasting and constraint systems to ensure stability in high-fidelity industrial simulations.

Technical Tool Developer

Unity Asset Store

April 2025 - Present

- Devised custom Unity asset pipeline utilities to automate import, validation, and packaging processes, expediting iteration cycles by **40%** for high-quality, store-ready assets.
- Engineered **Screenshot Pro**, an automated tool for multi-camera capture and resolution presets, streamlining QA documentation and marketing workflows.
- Built maintainable game architectures using advanced C# techniques and **ScriptableObject-driven design**, reducing errors in complex procedural generation systems by **30%**.

Unity Developer & Technical Lead

Grimoire Games

January 2022 - Present

- Directed development teams of 6+ people using **Scrum methodologies**, overseeing collaborative sprint planning and technical issue resolution.
- Developed custom editor tools for text manipulation and balance adjustments, significantly reducing the surface area for manual data-entry errors.
- Integrated automated build pipelines into the CI/CD process, reducing deployment time by **30%** and improving release stability through consistent automated QA checks.

EDUCATION

Bachelor's Degree in Game Design and Development

Minor in Game Programming & System Design • Universidad Cuauhtémoc • México, San Luis Potosí • 2025

CERTIFICATIONS

Unreal Engine Fundamentals

U-Echo Training Center • 2025

- This certificate strengthened my understanding of the Unreal Engine editor, Blueprints, and foundational workflows for 3D game development. It directly supports my ability to prototype, debug, and implement gameplay logic in Unreal-based projects.

SKILLS

- **QA Automation & Tools:** Unity Test Runner, GitHub Actions (CI/CD), Jira, Git, Plastic SCM, Bug Tracking, Root Cause Analysis.
- **Testing Methodologies:** Unit Testing, Integration Testing, Functional & Usability Testing, Regression Testing, Performance Profiling
- **Engines & Languages:** Unity (Advanced), C# (Advanced), Unreal Engine (Transitioning to C++), Android APIs.

Soft Skills: Methodical Root Cause Analysis, Precision & Attention to Detail, Resilience & Stress Management, Advocacy for Quality
